

TO: <approved lender name> (“Approved Lender”)

AND TO: **CANADA MORTGAGE AND HOUSING CORPORATION (“CMHC”)**

RE: Multi-unit residential project located at/to be built at <municipal address> (the “Project”)

I, the undersigned, in my capacity as

<as applicable: [certified/licensed/trained]
[as applicable: engineer, building consultant,
energy advisor, Certified Energy Manager, etc.]>

with expertise and experience in the field of

<as applicable: e.g., energy consumption
modelling and assessment of residential properties> ,

do hereby certify to the Approved Lender and CMHC that:

1. the information provided in the *Project Summary*, outlined in the attached report, dated <date of report>, is derived directly from the energy consumption and Greenhouse Gas (GHG) assessment I conducted in respect of the Project, using best building energy simulation practices; and
2. the Project qualifies for CMHC’s MLI Select energy efficiency criteria, as evidenced by the “✓” which I have included in the applicable table below:

(Dependent on the level of achievement of energy efficiency and GHG emissions reduction, place an “✓” and provide the requisite information in the applicable box (i.e., Level 1, 2 or 3) in either the table for new construction or the table for existing properties, as applicable)

For New Construction

Evaluated based on the % decrease in energy consumption and GHG emissions of the Project, as designed, relative to the energy consumption and GHG emissions of the Project designed to the requirements of the 2017 National Energy Code for Buildings (NECB) – Part 3 multi-unit buildings or the 2015 National Building Code (NBC), as applicable.

Level 1 20% – 24% lower than NECB or NBC	Level 2 25% – 39% lower than NECB or NBC	Level 3 ≥40% lower than NECB or NBC
The Project will be <%> lower than <as applicable: [NECB] or [NBC]>	The Project will be <%> lower than <as applicable: [NECB] or [NBC]>	The Project will be <%> lower than <as applicable: [NECB] or [NBC]>

For Existing Properties

Evaluated based on the % decrease in energy consumption and GHG emissions of the post-retrofit or post-renewal Project relative to pre-retrofit or pre-renewal energy consumption and GHG emission levels.

Level 1 15% – 24% decrease over pre-retrofit/pre-renewal consumption	Level 2 25% – 39% decrease over pre-retrofit/pre-renewal consumption	Level 3 ≥40% decrease over pre-retrofit/pre-renewal consumption
The energy consumption and GHG emissions will be reduced <%> by relative to the pre-retrofit or pre-renewal consumption.	The energy consumption and GHG emissions will be reduced <%> by relative to the pre-retrofit or pre-renewal consumption.	The energy consumption and GHG emissions will be reduced <%> by relative to the pre-retrofit or pre-renewal consumption.

I acknowledge that the energy analysis upon which this attestation is based may be reviewed, audited or assessed for accuracy and best practices by CMHC or used for CMHC's impact reporting purposes. I agree to provide timely responses to questions from CMHC regarding the analysis and findings and, if necessary, provide a revised analysis and attestation.
